Beyond R-Value - Wood is Good: The Perfect Wall Grows on Trees (AIA CEU)

Our monthly Beyond R-Value Continuing Education webinars, taking place every month, are a great opportunity to learn about us, our products or to dive deep into a specific topic with one of our presenters.

When: Wednesday, June 14, 2023

Time: 1 pm EST

Location: Virtual

Building science expert Joseph Lstiburek, of Building Science Corporation, will join us for our June 14th session in our monthly webinar series, Beyond R-Value Continuing Education. Focusing on the “The Residential Wall” which starts with understanding the importance of the four control layers as well as critical details which extends to the roof and slab. With wood fiber now being produced in North America and becoming more readily available Joe will discuss the benefits of incorporating this insulation into “The Perfect Wall” assembly. In an era of increased concerns around embodied carbon, wood fiber insulation offers a high performance thermal and sound product that not only helps with operational energy consumption, but also addresses embodied carbon.
